## **FOR IMMEDIATE RELEASE**

June 15, 2020

### **VAL-MATIC CAPABILITIES**

Val-Matic is a leader in the industry with capabilities dedicated to solving problems and delivering solutions to our customers. Degreed engineers in sales support, production and R&D departments as well as registered Professional Engineers (PE) with decades of product knowledge and experience can assist in designing systems and processes in many industries. Project Managers are trained and certified to deliver large projects on time and on budget. Val-Matic's Addison facility contains a state-of-the-art research and development facility along with a materials lab, a flow lab and a high pressure air system used to perform full-scale testing of large air valves. Val-Matic also has a team of field technicians to provide start-up, maintenance and warranty services anywhere across the globe. Valves are often a part of a complex process or system requiring field adjustments and tuning for optimal performance. Field training can be provided so that the facility can maintain operation and preventative maintenance programs. Valve refurbishing can be accomplished in the field or in our factories when required. For more information on Val-Matic's capabilities visit [www.valmatic.com](http://www.valmatic.com).
